

Masters in Conservation Biology

The University of Queensland's School of Biological Sciences is now accepting expressions of interest for the proposed new Masters of Conservation Biology course being launched in June 2013. This unique program will equip graduates with the necessary skills to make a difference in conserving the natural environment.

The 1 year intensive program will be taught by leading conservation scientists at UQ and conservation practitioners from organisations across Australia. Field trips to rainforests, coral reefs and the Australian outback will give students first-hand experience of real world conservation challenges.

Candidates with a passion for conservation and that have completed an undergraduate degree in a relevant discipline are strongly encouraged to apply. For more information, those interested can contact the academic coordinator Berndt Janse Van Rensburg <b.vanrensborg@uq.edu.au> or the program manager Ross Strong <r.strong@uq.edu.au>.
